

BOBBY WADHWA

Data Engineer – 3 YoE | +91 7982890020 | bobbywadhwa1303@gmail.com

TECHNICAL SKILLS

- **Programming Languages:** Python, PySpark, SQL
- **Databases & Connectors:** MySQL, PostgreSQL, Oracle DB
- **Data Warehouses:** AWS Redshift, Azure Databricks
- **Message Queue:** Amazon SNS
- **Distributed Computation Frameworks:** Apache Spark
- **Workflow Management:** AWS Step Function, Airflow
- **AWS Services:** S3, CloudWatch, Redshift, Athena, Glue, Code deploy.
- **Other Cloud Services:** Azure Data Factory, Azure Databricks
- **Build Tools & Containers:** Jenkins
- **Control Systems and Documentation:** GitHub, Azure DevOps, Jira

WORK EXPERIENCE

Data Engineer at PricewaterhouseCoopers (PwC)

Jan 2025 – Present

➤ **Client – Dali US (People and Financial Services)**

Tech Stack – Python, SQL, Oracle DB, Informatica, Azure – Databricks, ADLS

- Responsible to identify and migrate the source, target tables and transformations present in the stored procedure to Databricks.
- To work on tables being used for reports generation alongside report developers and provide them the transformed data from data warehouse.
- Responsible for developing/modifying python utility notebook which can be used to automate the data load process.
- Analyses/Scientific computations and large-scale data-processing using Databricks.
- To identify the source and target tables inside the informatica ETL jobs to recreate the same in Databricks
- Building workflows on Databricks once the migration of all source and target tables along with transformations are done.

Data Engineer at WNS Global Services

July 2022 – Dec 2024

➤ **Client – NatWest/Royal Bank Of Scotland (Banking and Financial Services)**

Tech Stack – Python, PostgreSQL, AWS – lambda, glue, Redshift, Step function, excel, CloudWatch.

- Responsible to automate the Data return process using AWS lambda, S3, step function for the ETL process.
- To create complex views for various interfaces and source systems using the mapping layouts provided by the analysts SQL for the Report Generation processes.
- Responsible for developing/modifying python which were added to the underlying framework.
- Performing weekly and monthly status report generation by ingesting / Integrating data and doing excel manipulation and SQL scripts.
- Analyses/Scientific computations and large-scale data-processing, and the new platform being AWS Glue Spark engine using PySpark for analysis/computations and Big Data handling.
- Cohort Load – ETL process using AWS Lambda, Glue jobs, s3.
- Building data warehouse using AWS Redshift after copying the processed data from S3.
- Working on the Transaction Analysis Dashboards using Tableau Desktop and AWS Lambda.
- Built ETL Pipeline using AWS lambda and orchestrated through Step function to generate Wealth Differences report.

EDUCATION

BTech – Computer Science

Jamia Hamdard University, Delhi

August 2018 – June 2022, CGPA 8.04/10
